PROFESSIONAL SUMMARY

Motivated Software Engineering undergraduate and Full-Stack Developer specializing in scalable web and desktop applications using React, Next.js, TypeScript, Node.js/Express, and Java/Spring Boot. Proficient in RESTful API design, MongoDB/MySQL, JWT authentication, and cloud deployment. Expanding into AI & ML through a certified program covering LLMs, RAG pipelines, and PyTorch. 8+ months of freelance experience delivering production-grade systems, including a full-stack driving school management platform and a point-of-sale desktop system, with a strong focus on clean, maintainable code and practical, client-ready solutions.

TECHNICAL SKILLS

- Frontend: JavaScript, TypeScript, React.js, Next.js, HTML5, CSS3, Tailwind CSS, Vite
- Backend: Node.js, Express.js, Java, Spring Boot, JavaFX, RESTful API Design
- Databases: MongoDB (Atlas), MySQL
- Auth & Security: JWT, Google OAuth, Spring Security
- AI & ML: python, PyTorch, ResNet-50, LLM Fundamentals, RAG Pipelines, Pandas, NumPy, Matplotlib, scikit-learn
- DevOps & Cloud: Git, GitHub, Docker, GitHub Actions (CI/CD), Render, Postman, Google Colab

KEY PROJECTS

FairAge – Fairness-Aware Age Estimation | Python, PyTorch, ResNet-50, Streamlit

- Fine-tuned ResNet-50 on 86K+ images across 9 classes, achieving 50.60% accuracy (~11% baseline).
- Conducted a fairness audit (4.90 pp racial gap) and applied 3 bias-mitigation ML strategies.
- Deployed a live Streamlit app featuring real-time prediction and interactive probability bars.

Ceylix POS – Enterprise Desktop System | Java, JavaFX, Spring Boot, MySQL

- Built a desktop POS for order management, stock tracking, and sales sessions via a layered architecture.
- Redesigned the UI across 7 controllers with a modern sidebar, card layout, and low-stock alerts.
- Fixed critical bugs in order persistence and profit calculation to improve financial reporting accuracy.

Personal Portfolio ([Kavindu.dev](https://kavindu.dev)) | Next.js, TypeScript, Tailwind CSS

- Developed and deployed a clean, dark-green themed developer portfolio to showcase personal projects.

Academic Projects | Java, Spring Boot, React, MySQL, MongoDB

- Built Food Farm, FairVision, SuperMarket (Layered), Elite Driving School (ORM), and GigLanka, mastering full-stack architecture, ORM design, and applied Machine Learning.

Diniru Driving Training School — Full-Stack Web Platform | React, Node.js, TS, MongoDB

- Developed a driving school platform with admin/student dashboards, MCQ exams, and payment tracking.
- Implemented JWT/Google OAuth, Axios token refresh, and serverless MongoDB caching for stability.
- Resolved SPA routing (404-on-refresh), CORS, and OAuth origin issues for a stable Vercel deployment.

EXPERIENCE

Freelance Full-Stack Developer | Self-Employed (8+ months)

- Delivered production-grade web and desktop applications for clients, including a full-stack driving school management platform and a JavaFX point-of-sale system.
- Owned the full development lifecycle — requirements gathering, UI/UX design, backend architecture, deployment, and post-launch client support.

EDUCATION

Graduate Diploma in Software Engineering | IJSE – Institute of Software Engineering — Sep 2024 - Present

- Major: Software Development | Minor: Machine Learning

Certified AI & ML Engineer Program | IJSE – Institute of Software Engineering — Feb 2024 - Jun 2026

- Python for ML, LLM Fundamentals, RAG Pipelines, Pandas, NumPy, Matplotlib, real-world project implementation.

G.C.E. Advanced Level | Technology Stream

- Results: B, C, S

Additional Certifications: Diploma in English – ESOF Metro Campus
